

Back Up Generator

1000 Gal. ArmorVault is the only technology the City of Knoxville will approve in this section of town

Electrician wires controls between Generator and ArmorVault

Piping and controls wiring were installed in two days

Nova Knoxville Location

Fueling Systems that Fuel Success.

Nova Communications was seeking a solution to their back-up Generator Fueling needs. The City of Knoxville would not permit them to use a belly tank, and the property owner would not let them install a tank on the site.

Allied Environmental Solutions met with the City and Nova's project engineers, and together designed a customized turnkey solution that satisfied all the parties involved. Allied's scope of services included procurement, permitting, technical drawings, installation and system start-up.

The completed system required a 1000 gallon ArmorVault tank, concrete foundation pad, venting, tank controls, signage and accessories.

Allied Environmental offers this and other services to commercial and government agencies. The GSA contract (GS07F-0045L) allows Government Entities to get the best system for their needs, quickly, efficiently and within budget
